

## **Fork Positioner for Forklifts**

Fork Positioner for Forklifts - A fork positioner is an apparatus constructed out of top quality materials intended to be able to withstand the most demanding operations and work environments. This piece of equipment could enable drivers to be able to operate the forks hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the entire load or the arms so as to facilitate more exact carrying and position in a quicker and much more efficient way.

The only one of its kind fork pocket design enables the one operating it to be able to safely swing the unit's forks without any fear of damaging the positioning cylinders. This can allow the worker the choice to either execute independent or simultaneous fork movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages could be converted into blade positioners on existing units.
